

IN THE SPECIFICATION:

Please rewrite the paragraph starting at page 13, line 23, as follows:

---

Q First, at step S201, the CPU 401 of the order management unit 203 searches the order management database 410 based upon the data ID sent from the terminal device 201a and extracts information stored in each field of the data ID for which a match has been obtained (S202). The extracted information includes the attribute information such as the image file name and number of pages to be printed, as shown in Fig. 5.
